

## 2022 Workshops and Events

Jayne Redman Studio Falmouth, Maine 04105 207.210.6556 jayneredman@me.com

Imagery on Die Formed Silver

Dies Three Ways

Tools and Jigs for Multiples

Engineering for Multiples

### Create Your Own Workshop!

Create a custom workshop. I am available for private or group classes.

Learn more about blanking dies, keum-boo or forming sheet and wire. Add to your knowledge of die forming with the hydraulic press and chasing and repousse. Make custom tools to speed up your production. Develop new computer skills to help with design and prototyping. You will have the opportunity to focus on new areas of special interest or refresh your knowledge of previously learned skills. Learn In-person at Jayne Redman Studio or Online at your own studio via Zoom.

Send me an email at [jayneredman@me.com](mailto:jayneredman@me.com) to schedule.

### National Workshops with Jayne Redman

February 10 - 13, Dies Three Ways

In-person at Diane Weimer Studio, Long Beach, California  
[www.dianeweimer.com](http://www.dianeweimer.com)

March 9 - 13, Engineering for Multiples

Online hosted by Silvera Jewelry School, Berkeley, California  
[www.silverajewelry.com](http://www.silverajewelry.com)

April 2 - 4, Blanking Dies and Pattern Development

In-person at Silver Spirals Creations, Winsted, Connecticut  
[www.silverspiralcreations.com](http://www.silverspiralcreations.com)

May 11 - 15, Imagery on Die Formed Silver

In-person at Silvera Jewelry School, Berkeley, California  
[www.silverajewelry.com](http://www.silverajewelry.com)

June 17 - 19, Dies Three Ways

Online hosted by Metalwerx, Waltham, Massachusetts  
[www.metalwerx.com](http://www.metalwerx.com)

August 4 - 7, Tools and Jigs for Multiples

Online hosted by Silvera Jewelry School, Berkeley, California  
[www.silverajewelry.com](http://www.silverajewelry.com)

September 16 - 18, Tools and Jigs for Multiples

In-person at Metalwerx, Waltham, Massachusetts  
[www.metalwerx.com](http://www.metalwerx.com)

November 10 - 13, Dies Three Ways

Online hosted by Silvera Jewelry School, Berkeley, California  
[www.silverajewelry.com](http://www.silverajewelry.com)

## Workshop Descriptions

Jayne Redman Studio Falmouth, Maine 04105 207.210.6556 jayneredman@me.com

**Imagery on Die Formed Silver:** Elizabeth Lyne has developed methods of etching to create a unique process. She is able to control and duplicate results to provide deep texture and detail to make her jewelry come alive. She adds contour and volume by pressing her shapes into carved dies of cast acrylic resulting in a wonderful combination of surface and form. Students will learn how to transform drawings and photos into high contrast, black & white images that are ideal for etching. They will create layouts of multiple shapes for etching onto silver, and make blanking dies to quickly cut them out. They will use die forming techniques to give depth and dimension.

**Form and Function: Engineering for Multiples:** Using nature as her inspiration Jayne Redman considers combinations of form and function, integrating mechanics with design and applying innovative engineering methods. This workshop will teach you how to develop patterns for many of the engineering concepts that she works with in her jewelry. Jayne will take you through the design process from initial drawings to final prototypes and finished pieces. You will learn the principles behind centrally radiating forms, properly nested forms, spacing for slotted forms, using faux hinging and tab construction, and work with them to create your own unique designs.

**Die Forming Three Ways:** This workshop teaches you three ways of die forming that will enable you to reproduce designs quickly and accurately. Silhouette dies allow you to make rounded relief forms in metal sheet. The addition of thermal reactive plastic to the silhouette die creates dimension and variation in your relief form. Carving non-conforming contour dies in thick cast acrylic provides complexity and detail. Self-registering, one piece blanking dies give you the ability to quickly cut out the shapes you conceive including relief forms made with silhouette or non-conforming dies. These processes can be used for both production and one of a kind work.

**Forming for Multiples: Advanced Blanking Dies:** Metal is a magical material that can be stretched, compressed, bent, curved and twisted. The same piece can take on an entirely different shape depending on how it is formed. This workshop will explore developing patterns and forming processes for metal sheet. Your previous knowledge of how to make blanking dies will give you the ability to quickly cut out duplicates of your pieces. Using wood, hard and thermal plastic and steel we will design tools that will give you consistent results. The goal will be to take an idea through the pattern development stage and explore multiple forming techniques for the resulting shape. You will make tools specifically for each forming process, resulting in finished pieces.

**Tools and Jigs for Multiples:** Creating findings that combine form with function will add to the uniqueness of your designs. The challenge is in duplicating them. Jayne Redman shows you how by introducing the many methods of making tools and jigs she has developed. Gain the knowledge to comfortably modify existing tools and invent tools and jigs of your own design. Create perfect wire loops, single and reverse curve ear wires, and linkage systems. Make a series of tools that will give you time saving ways of measuring, cutting, connecting and forming wire. Enhance your craftsmanship and add appeal to your jewelry.

**Making Multiples with Blanking Dies:** Self-registering one-piece blanking dies allow you to easily cut out precise duplicate shapes from non-ferrous sheet metals. You will be able to dramatically speed up production, gaining the time to get lost in the design process and experiment with forming and assembly. This workshop will teach you how to develop patterns and introduce you to many of the engineering concepts that Jayne works with in her jewelry. She will take you through the design process from initial drawings to final prototypes and finished pieces. You will be using The Jayne Redman® Rotational Bench Pin System to provide a slanted work surface. That will allow you to saw a bevel on the edge of your pattern to create the shearing action necessary for the shape to cut out cleanly.
